

Chapter 0

Justification

Throughout the construction industry, building professionals are constantly seeking advanced technological answers to new challenges and problems, there is also increasing pressure to balance tight budgets with new technology and optimise performance.

Consideration must be given to Design, installation, choice of material and subsequent maintenance, this often results in conflicting architecture, inferior materials and therefore, less durability.

With ***hertalan*** EPDM there is now a highly successful and viable alternative to the problems we suffer with flat roofs in the UK. Manufactured in The Netherlands, ***hertalan*** is innovative waterproofing for the new Millennium, for both refurbishment or new build ***hertalan*** provides the technology to ensure high performance, long lasting waterproofing solutions for flat roofs, within budget constraints.

This publication provides clear and precise technical descriptions and details of ***hertalan*** products and roofing systems, to allow the design of effective low maintenance roofs.

The ***hertalan*** details and instructions herein replace all previous ***hertalan*** application guides and Technical Data Sheets (TDS) and have been modified to compliment and enhance the very latest advances in building technology and EPDM waterproofing systems. Where consideration is given to any form of waterproofing not covered by this manual the reader should contact the ***hertalan*** Technical Department below.
